CONTENTS

Preface v

Theory of plastic deformation:— properties of low energy dislocation structures 1
D. Kuhlmann-Wilsdorf (Charlottesville, VA, U.S.A.)

EPITAXY

Misfit dislocations in heteroepitaxy 43
D. Cherns and C. J. Kiely (Bristol, U.K.)

Atomic structure of 60° and 90° dislocations in Ge/Si systems and critical phenomena 51
A. S. Nandedkar and J. Narayan (Raleigh, NC, U.S.A.)

Strain-relief mechanisms and nature of misfit dislocations in GaAs/Si heterostructures 57
S. Sharan and J. Narayan (Raleigh, NC, U.S.A.)

Critical thickness during three-dimensional epitaxial growth—a self-consistent approach. 65
K. Jagannadham and J. Narayan (Raleigh, NC, U.S.A.)

Experimental observations on the accommodation dislocation pattern for a low symmetry gradient orientation 75
S. A. Hackney (Houghton, MI, U.S.A.)

Descriptions of low energy misfit dislocation structures using the parabolic interaction potential 85
J. H. van der Merwe (Pretoria, South Africa) and W. A. Jesser (Charlottesville, VA, U.S.A.)

Reactions between crystal dislocations and grain boundary dislocations in near-coincidence boundaries. . 95
C. Solenthaler (Zurich, Switzerland)

Dislocation structures in large-angle grain boundaries in hexagonal close-packed materials 121
K. Shin and A. H. King (Stony Brook, NY, U.S.A.)

Triple-line disclinations in polycrystalline material 129
W. Bollman (Geneva, Switzerland)

Triple-line corrosion in high purity nickel 139
G. Palumbo and K. T. Aust (Toronto, Canada)

Impotent dislocation walls 149
T. Mura (Evanston, IL, U.S.A.)

Interfacial structure of θ precipitates in Al–5wt.%Cu alloys 153
S. A. Hackney, R. W. Fonda and G. J. Shiflet (Charlottesville, VA, U.S.A.)

CREEP AND RECOVERY

On the stability of the creep substructure in NaCl single crystals 161
S. V. Raj (Cleveland, OH, U.S.A.), G. M. Pharr (Houston, TX, U.S.A.) and J. D. Whittenberger (Cleveland, OH, U.S.A.)

High temperature creep based on a minimum energy consideration 177
R. J. Arsenault, L. Y. Bai and S. Li (College Park, MD, U.S.A.)

Some special types of low energy dislocation configurations in annealed α-Ti single crystals 185
L. Zhang and Z. Li (Hefei, China)

Dislocation structures in γ–γ' interfaces of the single-crystal superalloy SRR 99 after annealing and high temperature creep. 191
M. Feller-Kniepmeier and T. Link (Berlin, F.R.G.)

A two-parameter representation of dynamic dislocation distributions 197
K. Jagannadham and H. Conrad (Raleigh, NC, U.S.A.)

CONTENTS *(continued)*

Dislocation structure due to high temperature deformation in the γ' phase of a nickel-based superalloy . . 207
D.-L. Lin (T. L. Lin) and M. Wen (Shanghai, China)

Stability and transformation of dislocation cell structure in deformed 99.999 wt.% Al. 215
C. M. Su, E. W. Zhu and L. D. Zhang (Hefei, China)

Strain hardening and recovery of nickel Alloy 600 by X-ray measurements of dislocation density 219
C.-F. Lo, G.-J. Feng, W. E. Mayo and S. Weissmann (Piscataway, NJ, U.S.A.)

FATIGUE

The effect of temperature and amplitude on dislocation structures in cyclically deformed pure aluminium . 231
P. Charsley, U. Bangert and L. J. Appleby (Guildford, U.K.)

Low-energy dislocation structure in cyclically deformed quench-tempered steel 237
L. Yumen (Zi'an, China)

Low energy dislocation structures produced by cyclic softening 245
C. Laird, Z. Wang, B.-T. Ma and H.-F. Chai (Philadelphia, PA, U.S.A.)

Dislocation structures induced by cyclic deformation in dual-phase ferritic–martensitic microstructures . . 259
Z. G. Wang, Z. M. Sun and S. H. Ai (Shenyang, China)

On the onset of low-energy dislocation substructures in fatigue: grain size effects 267
R. Keller, W. Zielinski and W. W. Gerberich (Minneapolis, MN, U.S.A.)

FRICTION

Transition between tangled and polygonized dislocation microstructures in high-purity aluminium studied by internal friction and electron microscopy 281
M. L. Nó, J. San Juan (Bilbao, Spain) and C. Esnouf (Villeurbanne, France)

Cavitation-erosion-induced microstructures in copper single crystals. 287
A. Karimi, M. Maamouri and J. L. Martin (Lausanne, Switzerland)

Determining subsurface stress distributions in tribological samples from dislocation cell sizes in low energy dislocation structures. 297
Y. Zhu, D. Kuhlmann-Wilsdorf (Charlottesville, VA, U.S.A.) and T. Imura (Nagoya, Japan)

Low energy configuration of a superlattice dislocation and the strength anomaly in β-brass. 305
H. Saka and Y. M. Zhu (Nagoya, Japan)

The Peierls stress for a wide dislocation. 315
F. R. N. Nabarro (Johannesburg, South Africa)

FRACTURE

The effect of low energy dislocation structures on crack growth onset in brittle crystals 327
M. Lii, T. Foecke, X. Chen, W. Zielinski and W. W. Gerberich (Minneapolis, MN, U.S.A.)

Low energy cleavage fracture associated with the hydrogen embrittlement of refractory metal alloys . . . 339
K. Jagannadham (Raleigh, NC, U.S.A.), R. W. Armstrong (College Park, MD, U.S.A.) and J. P. Hirth (Pullman, WA, U.S.A.)

Mathematical prediction of dislocation cell sizes with strain using the mesh-length theory of work hardening 367
M. N. Bassim (Winnipeg, Canada)

Dislocation cell size in a spatially varying stress field of a crack tip region 373
K. Jagannadham (Raleigh, NC, U.S.A.), T. C. Pollock (College Station, TX, U.S.A.) and H. G. F. Wilsdorf (Charlottesville, VA, U.S.A.)

DEFORMATION

Deformation structures in lightly rolled pure aluminium 385
B. Bay (Lyngby, Denmark), N. Hansen (Roskilde, Denmark) and D. Kuhlmann-Wilsdorf (Charlottesville, VA, U.S.A.)

CONTENTS *(continued)*

Correlation between microstructure, dislocation dissociation and plastic anisotropy in ionic crystals 399
A. Foitzik, W. Skrotzki and P. Haasen (Göttingen, F.R.G.)

Dislocation motion and formation of dislocation structures during *in situ* deformation in a high voltage electron microscope 409
U. Messerschmidt and F. Appel (Halle, G.D.R.)

The dynamical response of dislocation structures introduced by twisting deformation of high purity aluminium single crystals 415
C. M. Su and T. S. Kê (Hefei, China)

Study of dislocation cell structures from uniaxial deformation of AISI 4340 steel 421
J. Cuddy and M. N. Bassim (Manitoba, Canada)

The development of the deformed microstructure in commercially pure nickel 431
N. K. Park and B. A. Parker (Victoria, Australia)

Dislocation substructures in mild steel deformed in simple shear 441
E. F. Rauch and J.-H. Schmitt (Saint Martin d'Hères, France)

The development of deformation substructures in face-centred cubic metals 449
I. Barker (Uxbridge, U.K.), N. Hansen (Roskilde, Denmark) and B. Ralph (Uxbridge, U.K.)
